WORKFORCE ANALYTICS · SCENARIO SIMULATOR · 2026

Can you cut 5% of workforce cost without losing your best people?

A scenario model across 2,004 employees · 47 roles · three cost levers.

2,004	47	3	$292.3M
EMPLOYEES	ROLES	LEVERS TESTED	BASELINE COST

The CHRO wants 5% off workforce cost — without losing critical talent

BASELINE

$292.3M

fully-loaded annual workforce cost
Meridian Cloud benchmark

TARGET

$14.6M

5% savings
without hollowing out critical roles

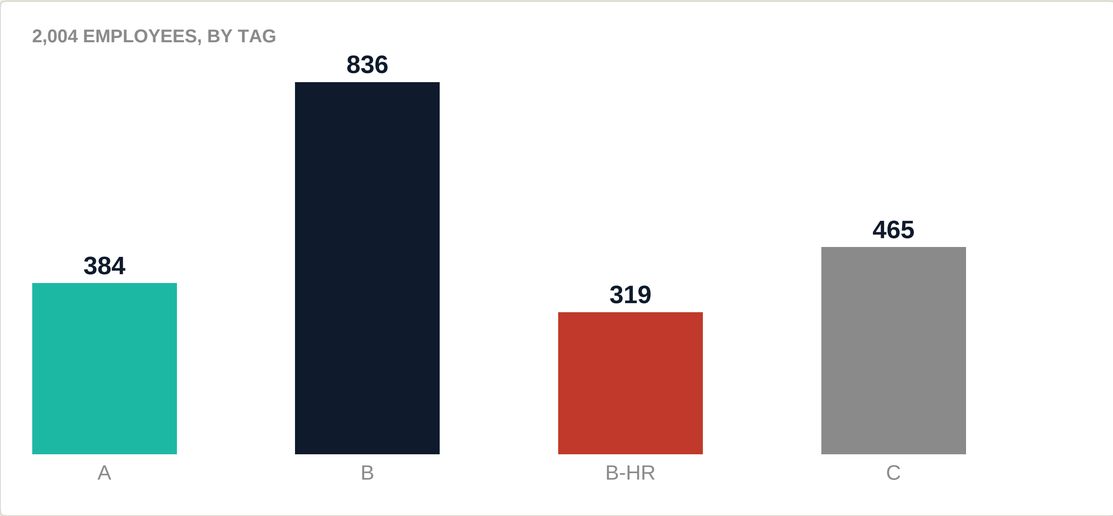
THREE LEVERS TESTED

Hiring freeze
Delayering
Targeted layoffs

source: meridian cloud hris · workforce scenario simulator, phase 0–1

Every role gets an A / B / B-HR / C tag before any lever touches it

A	Strategic impact and performance variance clears threshold
B-HR	Not strategic, but few backups and long time-to-hire
B	Supports an A-role, or strategic without clearing variance
C	Everything else — the lever-eligible pool



The hiring freeze clears the savings bar — then quietly guts critical roles

NET SAVINGS VS. 5% TARGET

5.6%

clears the target — attrition alone covers the cost line

PROTECTED POSITIONS LOST

77–90

A and B-HR roles that leave anyway, with no control over who

FAIL

freezing hiring can't tell attrition which roles matter — it fails the protection criterion, not the cost one

Targeted layoffs pass — and keep passing.

Net savings stays above 5% at every severance assumption tested (2–30 wks/yr).

NET SAVINGS AT PLAN

5.02%

clears the 5% target

ranked by lowest performance rating first

PASS

145 laid off at plan

HEADCOUNT LAID OFF · SEVERANCE ASSUMPTION 2–30 WKS/YR
